

 Corrugated
Manufacturing

 United States

 1000+

KEY BENEFITS

- Standardized work orders, PMs, inventory, purchasing, and fleet processes across all sites
- End-to-end visibility and accountability in MRO and inventory management
- Policy-driven purchasing with transparent approvals and auditability
- Centralized fleet maintenance with hours, meters, service plans, and contract tracking
- Seamless Acumatica ERP integration ensuring operational and financial alignment
- Improved control, reduced downtime, and higher operational confidence

Full Integration and Control Across Maintenance and Fleet Operations with **Bimser bEAM + Acumatica**

About **Corrugated Supplies Company**

Corrugated Supplies Company (CSC) is America's largest independent sheet feeder, supplying corrugated sheets through a high-service, technology-driven model that is designed for fast turnarounds and dependable quality. Since 1964, CSC has a forward-thinking approach to corrugated manufacturing and continues to invest in new capabilities and sites across the U.S.

Headquartered in Bedford Park, CSC is a family-owned manufacturer and distributor of corrugated sheets and 100% recycled medium. Their national network of sheet feeders provides over 15 billion square feet of sustainable packaging solutions to their customers all while delivering world-class service and quality. Their approach is supported by a modern ordering experience while providing the highest level of customer service culture.

Needs

Prior to bEAM, CSC managed work orders, preventive maintenance, inventory, purchasing, and fleet data through disconnected systems and spreadsheets. Inventory visibility varied by location, purchasing approvals lacked consistency, and fleet service schedules and contracts were difficult to track centrally.

- **Inventory** visibility and accountability were fragmented across locations.
- **Purchasing** lacked transparency; approvals and policy adherence were inconsistent.
- **Fleet data** (hours/meters, service schedules, contracts/renewals) lived in scattered tools and spreadsheets.
- **ERP connection** was limited, so operations-to-finance reconciliation required manual effort or double entry.

Bimser bEAM – Enterprise Asset Management System

Bimser bEAM is a comprehensive enterprise asset management solution covering the full maintenance lifecycle, from requests and work orders to preventive maintenance, inventory, purchasing, and fleet management. The platform supports mobile execution, evidence capture, analytics, approval workflows, and compliance visibility.

With integrated governance and ERP connectivity, bEAM enables organizations to manage assets, materials, and fleet operations in a fully traceable, auditable, and scalable environment.

Why Bimser bEAM?

Corrugated Supplies Company selected bEAM for its ability to unify maintenance, MRO, purchasing, and fleet operations on a single platform while integrating directly with Acumatica ERP. The solution provided standardized governance, strong inventory accountability, transparent purchasing controls, and centralized fleet oversight across multiple sites.

With Bimser bEAM:

- Maintenance and MRO processes became standardized and fully traceable
- Inventory visibility and accountability improved across all locations
- Purchasing workflows aligned with defined policies and approval thresholds
- Fleet maintenance centralized with service schedules, meters, and contracts managed in one system
- ERP integration eliminated manual reconciliation and duplicate data entry
- A controlled, scalable operational framework was established

“

bEAM is a great CMMS with a phenomenal team. We were looking for a solution to manage our work orders and inventory while integrating seamlessly with Acumatica. With bEAM, we are much more in control than ever before. The system helped us reduce maintenance downtime, improve production performance, and achieve the ERP integration that was critical for us.

”

Adam Cox

Corrugated Supplies Company

Results & Benefits

Key outcomes of the project include:

- Digitalized and standardized maintenance, inventory, purchasing, and fleet processes
- Clear ownership and accountability across operational workflows
- Improved procedural compliance by design
- Enhanced reporting and decision-making with reliable ERP-aligned data
- Reduced maintenance downtime and stronger production continuity

“

Corrugated Supplies Company partnered with Bimser to deploy bEAM integrated with Acumatica, unifying work orders, PMs, inventory, purchasing, and fleet on one governed platform across sites. Configured to CSC's procedures, the rollout made inventory and purchasing visible and accountable and brought PM schedules and compliance into clear view. ERP sync keeps operations and finance aligned with consistent governance and dependable reporting. Big thanks to the CSC team—clear requirements, fast feedback, and strong ownership drove quick adoption.
